

ABSTRACT OF THE DISCLOSURE

A switch that implements or removes operation restrictions of a keyless entry system for a back door or trunk is easily mounted on a door panel. A finisher for a vehicle includes: an elongated body; a plurality of mounting portions that are formed protruding from a rear surface side of the body, mounting members that are mounted on a vehicle body being either held by or fixed to the mounting portions; and a bracket formed in an elongated shape and having a switch in a vicinity of a center portion in a longitudinal direction thereof. The bracket is aligned along a longitudinal direction of the body, and two end portions of the bracket are each mounted on the mounting portions in such a manner that a bridge is formed between two adjacent mounting portions from among the plurality of mounting portions, and the switch is able to be operated from a vehicle exterior side of the body.
